# GAS•TRAC® LZ-30

**Quickly and safely detect methane gas leaks in difficult to reach areas.**

The LZ-30 from SENSIT Technologies is a compact methane-specific leak detector that provides fast and accurate readings at distances up to 100 feet.

The LZ-30 utilizes TDLAS (tunable diode laser absorption spectroscopy) technology to provide instantaneous and accurate responses to the presence of methane gas.

Designed to be competitively priced, the LZ-30 is perfect for hard to reach areas, eliminating the need to directly access the gas plume, climb to elevated areas, or access fenced-in property and potentially hazardous situations through windows.

**SCal-D** is the Desktop version of the software. This single-user software application comes standard with Calibration Stations.

**SCal-N** is the Network version of the software. SCal-N is sold separately with a multi-year license. Use SCal-N to download data from remotely located Calibration Station(s). Data is stored in SQL Server.

**SCal-N is divided into two categories:**

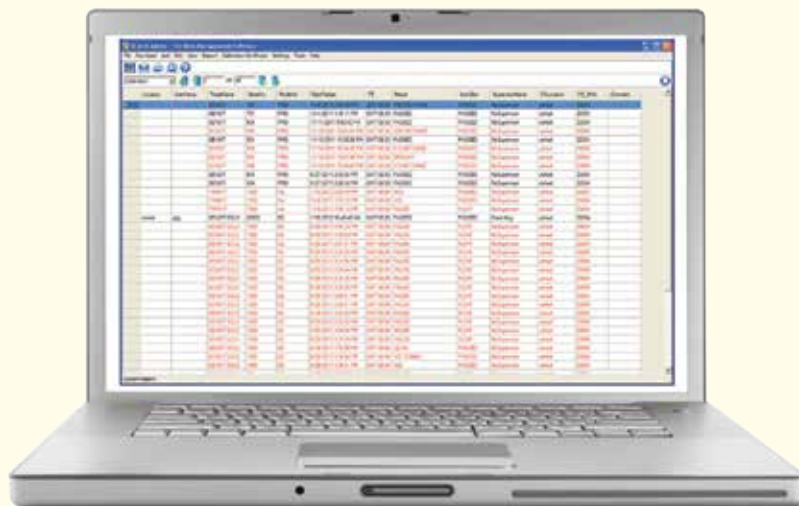

## **Admin Application:**

The Admin application is the host for the automatic downloading of remote Calibration Stations that have the proper communication hardware installed. This program is SQL Server based. You must install and use only one copy of SCal-N as Admin.

## **User Application:**

The User Application allows viewing of selected data stored in the Server database from any computer that has access or privileges. An authorized login and password to the SQL Server is required for each User application installed.
